Exploring Share Permissions

Scenario

In this activity, you will create a network share and assign share-level permissions.

1. Navigate to the C: drive and create a folder named ShareXX with the XX being your initials.

2. Share the ShareXX folder.
   a) Select the folder, display its pop-up menu, and select Share with.
   b) Select Advanced Sharing.
   c) If necessary, in the User Account Control dialog box, in the user name text box, type student.
   d) Check Share this folder, and then select OK.

3. Grant the Everyone group Read and Modify share permissions.
   a) Select Properties.
   b) On the Security tab, select Advanced.
   c) In the Advanced Security Settings for shareXX dialog box, select the Effective Access tab.
   d) Select Select a user, and in the Select User or Group dialog box, type everyone and select Check Names.
   e) Select OK and then select View effective access.

The Everyone group currently has no effective access.

   f) Select the Permissions tab, and then select Add.
   g) Select Select a principal.
   h) Type everyone, select Check Names, and select OK

Now, three basic permissions are applied.

   i) Select Show advanced permissions.
   j) Select Show basic permissions.
   k) Check Modify.

Write is selected automatically.

   l) Show advanced permissions again and examine the changes.
   m) Select OK.
   n) Select the Effective Access tab.

A banner across the top of the dialog box warns you that you need to apply changes.

   o) Select Apply.
   p) Examine the Effective Access section and verify that permissions have changed for Everyone.
   q) Select OK, and then select Close.
